# Package 'OhdsiSharing'

February 17, 2020

Type Package
Title Package for sharing of the results of the OHDSI tools
Version 0.2.0
<b>Date</b> 2020-02-17
Author Martijn Schuemie [aut, cre], Marc Suchard [aut], Lee Evans [aut]
Maintainer Martijn Schuemie <schuemie@ohdsi.org></schuemie@ohdsi.org>
<b>Description</b> Package for sharing of the results of the OHDSI tools, with functions for encrypting results and sending results through SFTP to a central site.
Imports rJava, ParallelLogger
Suggests testthat
License Apache License
RoxygenNote 7.0.2
R topics documented:

compressAndEncryptFolder	2
compressFolder	3
decompressFolder	3
decryptAndDecompressFolder	4
decryptFile	5
encryptFile	5

$sftpRmdir \ \dots \ \dots \ \dots \ \ 1$	C
sftpUploadFile	1
sftPwd	1

Index 12

```
compressAndEncryptFolder
```

Compress and encrypt a folder

## **Description**

Compress and encrypt a folder

## Usage

```
compressAndEncryptFolder(sourceFolder, targetFileName, publicKeyFileName)
```

## **Arguments**

```
sourceFolder Name of the folder that must be encrypted.

targetFileName Name of the file that will hold the encrypted data.

publicKeyFileName

Name of the file where the public key is stored.
```

## **Details**

Compresses all files in a folder and its subfolders, and encrypts using the provided public key.

## **Examples**

```
## Not run:
generateKeyPair("public.key", "private.key")

# Create a folder with some data
dir.create("test")
data <- data.frame(x = runif(1000), y = 1:1000)
saveRDS(data, "test/data1.rds")
saveRDS(data, "test/data2.rds")

compressAndEncryptFolder("test", "data.zip.enc", "public.key")
decryptAndDecompressFolder("data.zip.enc", "test2", "private.key")

## End(Not run)</pre>
```

compressFolder 3

compressFolder

Compress a folder

## **Description**

Compress a folder

## Usage

```
compressFolder(sourceFolder, targetFileName)
```

## **Arguments**

```
sourceFolder Name of the folder that must be compressed.

targetFileName Name of the file that will hold the compressed data.
```

#### **Details**

Compresses all files in a folder and its subfolders, and stores it in a single zip file.

## **Examples**

```
## Not run:
# Create a folder with some data
dir.create("test")
data <- data.frame(x = runif(1000), y = 1:1000)
saveRDS(data, "test/data1.rds")
saveRDS(data, "test/data2.rds")

compressFolder("test", "data.zip")
decompressFolder("data.zip", "test2")
## End(Not run)</pre>
```

decompressFolder

Decompress a folder

# Description

Decompress a folder

# Usage

```
decompressFolder(sourceFileName, targetFolder)
```

## **Arguments**

```
sourceFileName Name of the file that must be decompressed.

targetFolder Name of the folder that will hold the extracted data.
```

#### **Details**

Extracts all compressed files to a folder.

## **Examples**

```
## Not run:
# Create a folder with some data
dir.create("test")
data <- data.frame(x = runif(1000), y = 1:1000)
saveRDS(data, "test/data1.rds")
saveRDS(data, "test/data2.rds")

compressFolder("test", "data.zip")
decompressFolder("data.zip", "test2")
## End(Not run)</pre>
```

decryptAndDecompressFolder

Decrypt and decompress a folder

## **Description**

Decrypt and decompress a folder

#### Usage

```
\tt decryptAndDecompressFolder(sourceFileName, targetFolder, privateKeyFileName)
```

## **Arguments**

```
sourceFileName Name of the file that must be decrypted.

targetFolder Name of the folder that will hold the unencrypted data.

privateKeyFileName
```

Name of the file where the private key is stored.

## **Details**

Decrypts the data using the provided private key and extracts all files to a folder.

## **Examples**

```
## Not run:
generateKeyPair("public.key", "private.key")

# Create a folder with some data
dir.create("test")
data <- data.frame(x = runif(1000), y = 1:1000)
saveRDS(data, "test/data1.rds")
saveRDS(data, "test/data2.rds")</pre>
```

decryptFile 5

```
compressAndEncryptFolder("test", "data.zip.enc", "public.key")
decryptAndDecompressFolder("data.zip.enc", "test2", "private.key")
## End(Not run)
```

decryptFile

Decrypt a data file

## Description

Decrypt a data file

#### Usage

```
decryptFile(sourceFileName, targetFileName, privateKeyFileName)
```

## **Arguments**

```
sourceFileName Name of the file that must be decrypted.

targetFileName Name of the file that will hold the unencrypted data.

privateKeyFileName
```

Name of the file where the private key is stored.

#### **Details**

Decrypts the data using the provided private key.

# **Examples**

```
## Not run:
generateKeyPair("public.key", "private.key")
data <- data.frame(x = runif(1000), y = 1:1000)
saveRDS(data, "data.rds")
encryptFile("data.rds", "data.rds.enc", "public.key")
decryptFile("data.rds.enc", "data2.rds", "private.key")
## End(Not run)</pre>
```

encryptFile

Encrypt a data file

## Description

Encrypt a data file

#### Usage

```
encryptFile(sourceFileName, targetFileName, publicKeyFileName)
```

6 generateKeyPair

#### **Arguments**

```
sourceFileName Name of the file that must be encrypted.

targetFileName Name of the file that will hold the encrypted data.

publicKeyFileName
```

Name of the file where the public key is stored.

#### **Details**

Encrypts the data using the provided public key.

## **Examples**

```
## Not run:
generateKeyPair("public.key", "private.key")
data <- data.frame(x = runif(1000), y = 1:1000)
saveRDS(data, "data.rds")
encryptFile("data.rds", "data.rds.enc", "public.key")
## End(Not run)</pre>
```

generateKeyPair

Create a public-private key pair

## **Description**

Create a public-private key pair

## Usage

```
generateKeyPair(publicKeyFileName, privateKeyFileName)
```

# Arguments

```
\label{lem:name} Name\ of\ the\ file\ where\ the\ public\ key\ should\ be\ stored. \mbox{privateKeyFileName}
```

Name of the file where the private key should be stored.

#### **Details**

Creates an RSA 4096-bit public-private key pair. The public key can be used to encrypt data, and only with the private key can the data be decrypted.

## **Examples**

```
## Not run:
generateKeyPair("public.key", "private.key")
## End(Not run)
```

sftpCd 7

sftpCd

Change the current working director

## **Description**

Change the current working director

## Usage

```
sftpCd(sftpConnection, remoteFolder)
```

## **Arguments**

sftpConnection An SftpConnection object as created by the sftpConnect function. remoteFolder The folder on the server to change to.

sftpConnect

Connect to the OHDSI SFTP server

## **Description**

Connect to the OHDSI SFTP server

## Usage

```
sftpConnect(privateKeyFileName, userName)
```

## Arguments

 ${\tt privateKeyFileName}$ 

A character string denoting the path to an RSA private key.

userName

A character string containing the user name.

## Value

An SftpConnection object

sftpDisconnect

Disconnect from the OHDSI SFTP server.

# Description

Disconnect from the OHDSI SFTP server.

## Usage

```
sftpDisconnect(sftpConnection)
```

# **Arguments**

sftpConnection An SftpConnection object as created by the sftpConnect function.

8 sftpLs

sftpGetFile

Get a file from the SFTP server

## Description

Get a file from the SFTP server

## Usage

```
sftpGetFile(sftpConnection, remoteFileName, localFileName = remoteFileName)
```

# Arguments

```
sftpConnection An SftpConnection object as created by the sftpConnect function.
remoteFileName The name the file on the server.
```

localFileName The name the file should have locally.

sftpLs

List the files in folder on the server.

## Description

List the files in folder on the server.

## Usage

```
sftpLs(sftpConnection, remoteFolder = "./")
```

# Arguments

```
sftpConnection An SftpConnection object as created by the sftpConnect function. remoteFolder The folder on the server. Defaults to the current folder.
```

## Value

A data frame with two columns: the file names, and the file types (directory, link, or file).

sftpMkdir 9

sftpMkdir Make a directory

## Description

Make a directory

## Usage

```
sftpMkdir(sftpConnection, remoteFolder)
```

# Arguments

```
sftpConnection An SftpConnection object as created by the sftpConnect function.

remoteFolder The folder on the server to create.
```

sftpPutFile

Put a file on the SFTP server

## Description

Put a file on the SFTP server

# Usage

```
sftpPutFile(
  sftpConnection,
  localFileName,
  remoteFileName = basename(localFileName)
)
```

## **Arguments**

```
{\tt sftpConnection}\ \ An\ SftpConnection\ object\ as\ created\ by\ the\ sftpConnect\ function.
```

localFileName The path to the local file to upload.

remoteFileName The name the file should have on the server.

10 sftpRmdir

sftpRename

Rename a file or folder

## Description

Rename a file or folder

## Usage

```
sftpRename(sftpConnection, oldRemoteFilename, newRemoteFilename)
```

## Arguments

 ${\tt sftpConnection}\ \ An\ SftpConnection\ object\ as\ created\ by\ the\ sftpConnect\ function.$   ${\tt oldRemoteFilename}$ 

The file on the server to rename.

newRemoteFilename

The new file name.

sftpRm

Remove a file

## Description

Remove a file

## Usage

```
sftpRm(sftpConnection, remoteFile)
```

## **Arguments**

sftpConnection An SftpConnection object as created by the sftpConnect function. remoteFile The file on the server to remove.

sftpRmdir

Remove a directory

# Description

Remove a directory

## Usage

```
sftpRmdir(sftpConnection, remoteFolder)
```

## Arguments

sftpConnection An SftpConnection object as created by the sftpConnect function. remoteFolder The folder on the server to remove.

sftpUploadFile 11

sftpUploadFile	Upload a single file to the OHDSI SFTP server	

## Description

This function combines calls to the sftpConnect, sftpPutFile, and sftpDisconnect functions. A random string will be prefixed to the file name to prevent overwriting existing files on the server.

## Usage

```
sftpUploadFile(privateKeyFileName, userName, fileName)
```

## **Arguments**

privateKeyFileName

A character string denoting the path to an RSA private key.

userName A character string containing the user name.

fileName A character string denoting the path to file to upload.

sftPwd	Get the present working directory

# Description

Get the present working directory

## Usage

```
sftPwd(sftpConnection)
```

## **Arguments**

sftpConnection An SftpConnection object as created by the sftpConnect function.

## Value

A character string representing the current remote folder name.
